Built-in = The SmartSound capability is integrated into the application giving the user searching and customization from inside the host application.

Plug-in = SmartSound has independently provided a special plug-in to work with the host application.

Bundle = The host application includes a fully-licensed version of Sonicfire Pro software.

* No Multi-Layer Support. Multi-Layer Discs will work as Stereo Discs in these cases.

** Although not officially supported by Pinnacle, the SmartSound capability is accessible in Pinnacle Studio 11 & 12.
